

Yu Shi - Front-End Developer

New York, NY 10027 | 917-518-2999 | yushiys95@gmail.com | [GitHub](#) | [Blog](#) | [LinkedIn](#) | [Portfolio](#)

EXPERIENCE

Infosys

Associate Software Engineer

New York, NY

October 2021 - Present

- Award received: adapted very well to the IDP Development and UX improvements, challenges and able to grasp, deliver with minimum rework.
- Developed prototypes with ReactJS, HTML5 and CSS for a customer support application utilizing the bootstrap framework
- Communicate and collaborate with quality assurance analysts to ensure that the final product is free of errors.
- Expand features, refine code, and improve processes, producing smoother operations and enhancing user engagement.

Taco Bandito

Assistant Manager

New York, NY

September 2016 - March 2020

- Served approximately 200 customers a day in a fast-paced environment; reconciled transactions often totaling ~\$2,000 at end of each business day.
- Supervised a team of seven in coordinating supplies and orders for restaurant on a daily basis to ensure supplies meet demands.

Church of Transfiguration

Administrator

New York, NY

July 2015 - September 2016

- Collaborated with internal team members to translate correspondence from English to Chinese to create official church documents.

TECHNICAL PROJECTS

Fotoset | React, Redux, Rails, PostgreSQL, HTML, CSS

[Frontend](#) | [Backend](#) | [Demo](#) | [Website](#)

A photo sharing application with camera setting information, include map search, and weather search

- Enabled user authentication with JWT in localStorage and secure, encrypted user database
- Created an interactive Google Map with a search bar using Map JavaScript API, Geocoding API, and Place API
- Implemented Yahoo Weather API search bar that allows users access to location-specific current weather and 10-day forecast data

Travelatr | React, Rails, PostgreSQL, HTML, CSS

[Frontend](#) | [Backend](#) | [Demo](#) | [Website](#)

A travel information website provides latest travel destination recommendations, including facts, and flights search

- Created Ruby on Rails API backend with endpoints for various models using MVC pattern
- Implemented Skyscanner API lets you search for flights and get flight prices from Skyscanner's database of prices
- Constructed using ReactJS functional and styled with custom CSS to improve user experience
- Incorporated Google Places API to show Google reviews and images of locations

Amazon Clone | React, Context API, Firebase, Material-UI, HTML, CSS

[Frontend](#) | [Backend](#) | [Website](#)

An Amazon Clone that allows users to checkout the items

- Used the Firebase Realtime Database and Firebase Cloud Functions as the backend to push the order to database
- Utilized React Context API to share state down a component tree and assist in solving prop-drilling
- Integrated Stripe Payment Processor to accept payment on the checkout page
